HIGH PERFORMANCE QUAD BIPOLEAR OPERATIONAL AMPLIFIER

- HIGH GAIN BANDWIDTH PRODUCT :
25MHz
- HIGH SLEW RATE : **15V/ μ s**
- SINGLE OR DUAL SUPPLY OPERATION :
3V TO 30V ($\pm 1.5V$ to $\pm 15V$)
- LOW VOLTAGE NOISE : **14nV/ \sqrt{Hz}**
- NO PHASE INVERSION
- ESD TOLERANCE : **2kV**
- LATCH-UP IMMUNITY
- **SPICE MACROMODEL INCLUDED IN THIS SPECIFICATION**

DESCRIPTION

The TSH24 is a quad bipolar operational amplifier offering a single supply operation from 3V to 30V with very good performances : medium speed (25MHz), unity gain stability and low noise.

The TSH24 is therefore an enhanced replacement of standard dual operational amplifiers.

APPLICATIONS INFORMATION

TSH24 IN COMPARATOR APPLICATION

The TSH24 is a quad high performances operational amplifier featuring speed of 30MHz and single supply operation from 3V to 30V.

Most of operational amplifiers are not suited for comparator use because of low transition speed, output signal incompatible with standard logics level and mainly, phase inversion.

The phase inversion occurs when a strong differential signal is applied to the device inputs. The output level is then inverted and shows a wrong logic state. The TSH24 does not present this problematic behaviour.

Figure 1 : Basic comparator application

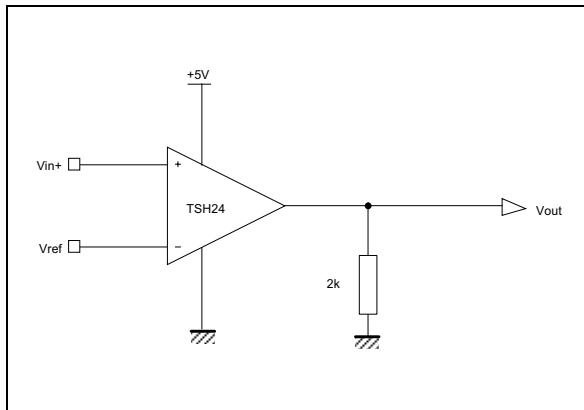

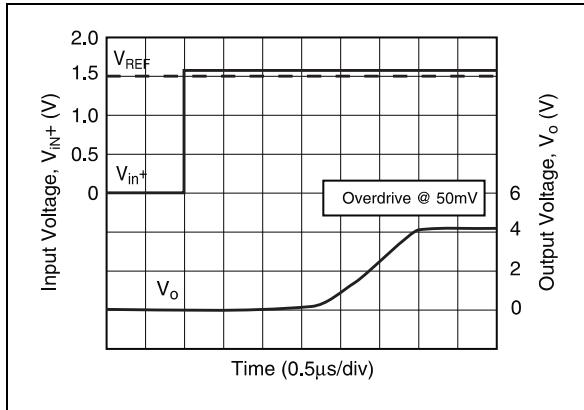

Figure 3 : Transition speed@ 50mV overdrive

Displayed curves below show the device response in standard comparator configuration without external components.

Transition speed : Typical transition speed under a single 5V supply voltage is about $2\mu s$ from 50mV overdrive. V_{OH} min. is 3.7V and V_{OL} max. is 0.2V (2kΩ load) making it compatible with standard logic families.

Figures 3 & 4 show output signal transition for a 50mV and 250mV input signal overdrive respectively of $3\mu s$ and $1\mu s$.

Figure 2 : Operating conditions

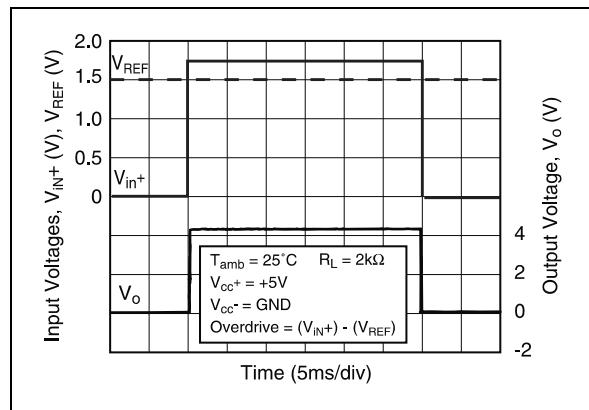

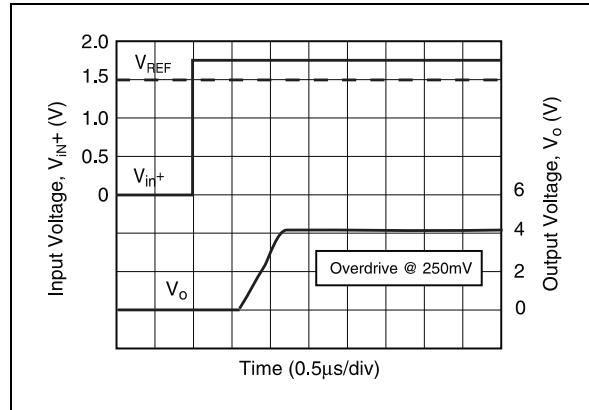

Figure 4 : Transition speed@ 250mV overdrive

TSH24

PHASE INVERSION

At high differential input voltage, the TSH24 keeps the right output level thanks to its specific input structures.

The advantage is obvious on the following figures and can be also an advantage in linear use when saturation might occur.

Figure 5 : Behaviour with TSH24

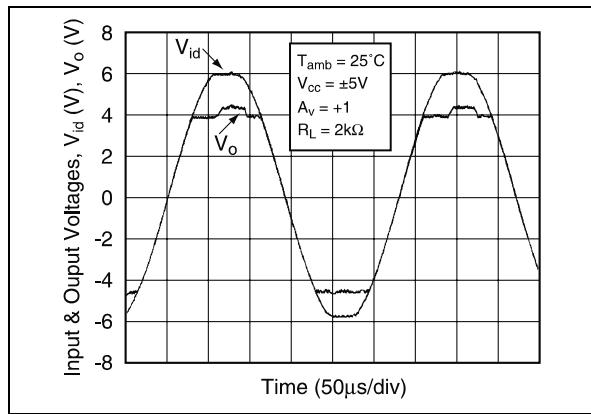

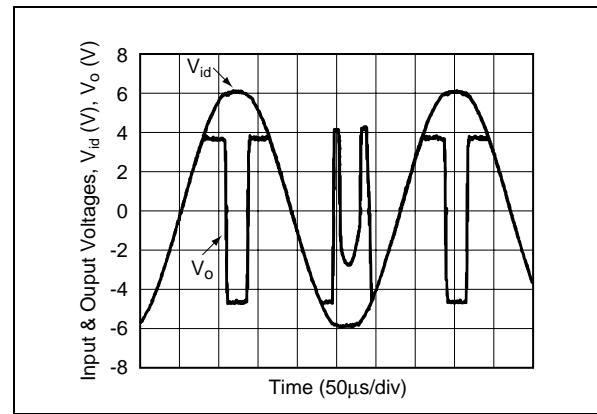

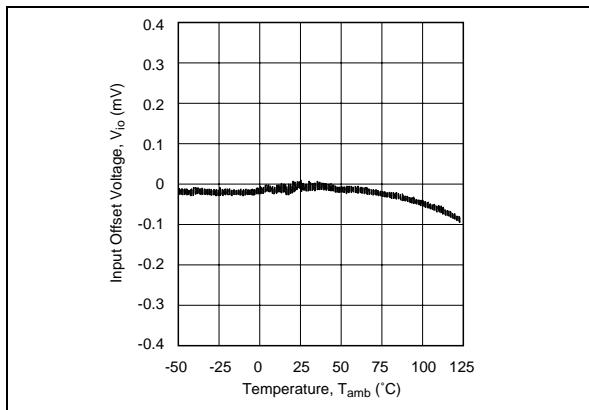

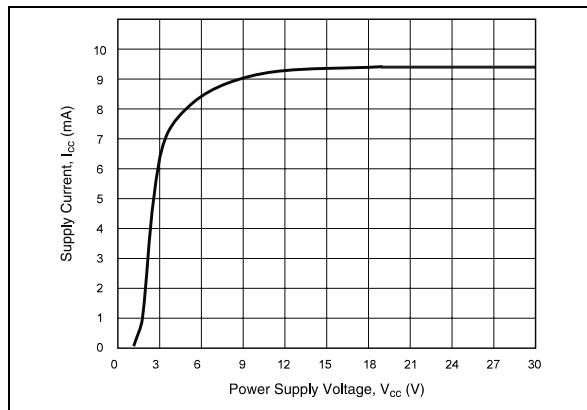

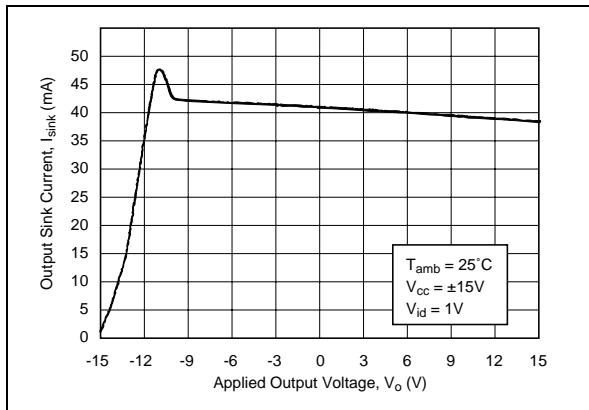

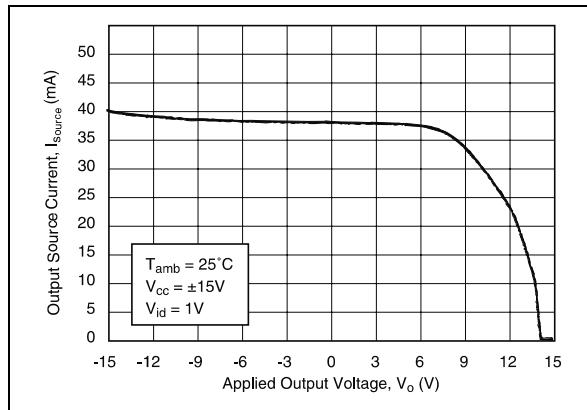

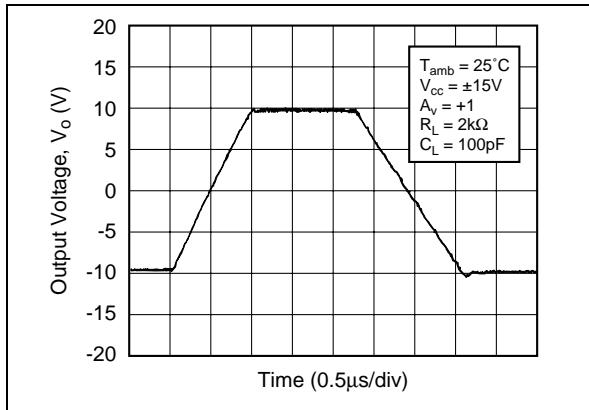

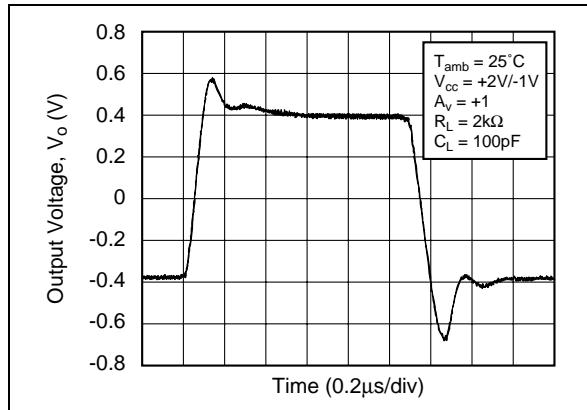

Figure 5 & 6 show the behaviour in follower stage with saturation output of TSH24 versus 15MHz standard operational amplifier.
